

Service Maintenance & Repair

Service Maintenance & Repair

FM Environmental Ltd. have over 30 years experience installing wastewater treatment and pumping equipment. The company recognises the necessity for comprehensive back-up maintenance and servicing facilities to ensure reliable long-term operation of such equipment.

The Service Division of FM Environmental Ltd. has led the way for many years providing our customers with the complete after-sales service which includes:

- > **preventative maintenance programmes**
- > **operation & maintenance management contracts**
- > **all inclusive service agreements**
- > **24 hour emergency call out facilities**
- > **on-site repairs / workshop repairs**
- > **collection / delivery of plant and equipment**
- > **fully qualified, experienced service engineers - regionally based**
- > **motor rewinds**
- > **Remote Monitoring & Control**

Consequences of not Maintaining Sewage Equipment

- > **premature failure of equipment**
- > **possible pollution and smell**
- > **potential prosecution by Local Authority**
- > **costly repairs/replacement of equipment**

Benefits of Service Agreement for Sewage Equipment

- > **periodic planned maintenance of equipment by experienced engineers**
- > **improved reliability of system**
- > **peace of mind**
- > **major cost savings in long term**
- > **access to out-of-hours callout numbers**
- > **health and safety considerations**
- > **condition of planning**

SERVICE MAINTENANCE & REPAIR

Preventative Maintenance Programmes

Periodic preventative maintenance by professional engineers will ensure the trouble-free operation of pumps and wastewater treatment equipment. General maintenance can be carried out on-site while more specialised repairs can be facilitated at the Company's Service and Repair Workshop. Frequency of Service visits can be determined by the needs of the customer and the type of equipment to be maintained. As with most machinery, regular maintenance and attention is critical if troublesome breakdowns and costly repairs are to be avoided.

Operation & Maintenance Management

Taking full ownership for the operation and maintenance of pumping and wastewater treatment equipment is a service now available from

FM Environmental. This service incorporates preventative maintenance, day to day general maintenance and emergency response maintenance to ensure total customer peace of mind in respect to the equipment installed. Twenty-four hour remote monitoring of plant, effluent sampling and analysis, and regular liaison with Local Authorities can all be included in a customer-tailored Operation and Maintenance Management Contract.

Grease Guardian® Maintenance

FM Environmental's Service Division has now expanded to incorporate the same after-sales service for its range of Grease Guardian equipment. All the benefits of our Service Division are now available to our Grease Guardian customers.
