# Asset & Performance Management for Water & Wastewater Facilities

InvistaTech SiteVu is an agile and dynamic web-based environment which provides a turnkey management solution for water and wastewater treatment facilities. The system provides real-time data bridging, data charting and analysis, enterprise and compliance reporting as well as offering online collaboration and visualization dashboards.

SiteVu is built on the latest Microsoft technologies and comes with a range of asset maintenance, process monitoring, energy management and reporting applications that help you manage relevant audit and operational information across multiple installations. Operational Status, Performance Metrics, Asset Inventories, Worksheets, Maintenance Schedules and Calibration Records can all be managed and accessed through **SiteVu's** powerful interface.

Plant Operation and Maintenance simplified
Compliance Record automated
Task allocation clarified
Management Reporting/Charting

Meet statutory compliance requirements

Produce Budget Submissions

Monitor Asset Performance
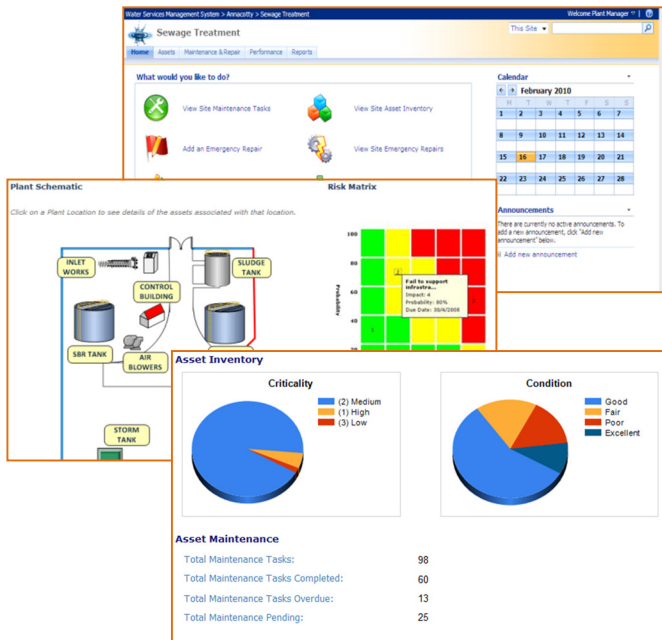

Optimise your maintenance scheduling

Quantify your operational resource needs

Generate Environmental & Energy Audit Reports.

Access Management reports and visualization dashboards in real-time

Integrate with existing SCADA or LIMS systems or add Invista DCU (Data Collection Units) to directly monitor facility health and performance.

Track and record historical information on key process paramters (e.g. Dissolved Oxygen, Flow Levels, Power Consumed….)

With accurate data comes decision-making with impact
