

Systems Developer

Location: Newry Head Office
Salary: TBC
Closing Date: 02/07/2021, 09.30am
Contract: Fixed Term Contract (12 months), Full time (40 Hours)

Job Summary

FM Environmental provides services in design, installation and servicing of pumping and wastewater treatment equipment for water authorities and construction partners throughout Ireland and the UK. It also manufactures its own range of industrial grease removal equipment that is sold through distributors across 20 countries worldwide for use in commercial premises such as hotels, hospitals, schools and in the marine industry.

The **Systems Developer** will play a key role in ensuring projects (change initiatives) meet objectives on time by increasing employee adoption and usage. The individual will focus on changes to business processes, systems and technology.

The project will implement a new cloud platform for data management that will allow for the integration of IT systems and multi-department data to provide key, real-time business insights. This will also allow for the development of two bespoke applications to manage site activity (installation & servicing) and inventory management. This centralisation of systems and data will enhance interdepartmental visibility of processes and projects, improving business efficiencies and supporting company growth.

The successful graduate will **lead** this project, in a supportive partnership with Letterkenny Institute of Technology and will also have the opportunity to avail of a set learning package with an academic institution as part of the employment offering

Essential criteria

- An Honours degree in the field of Computer Science or equivalent.
- Legally permitted to work in the UK.

Desirable criteria

- 2 years application development experience.
- Experience in completing a Software Development project.
- Knowledge of Database design and maintenance.
- Knowledge of System\Software requirements.

- Experience in Cloud Computing Solutions.
- Experience in Mobile Application Development.
